Get Excited About the Brain!

A Coloring & Activity Book
For Kids Ages 8–12

The National Institute of Mental Health (NIMH) is the lead federal agency for research on mental disorders. NIMH is one of the 27 Institutes and Centers that make up the National Institutes of Health (NIH), the nation’s largest medical research agency. NIH is part of the U.S. Department of Health and Human Services.
PARTS OF THE BRAIN

**PARIETAL LOBE**
Helps you understand language and process information from your five senses

**FRONTAL LOBE**
Aids in complex thinking, learning, and problem-solving

**OCCIPITAL LOBE**
Receives and makes sense of visual information, such as recognizing faces and objects

**TEMPORAL LOBE**
Responsible for hearing and understanding sounds

**CEREBELLUM**
Responsible for balance and coordination

**BRAIN STEM**
Controls your basic body functions, such as breathing, temperature, and heart rate
THE CEREBRAL CORTEX

FUN FACT

The cerebral cortex is the wrinkly outer layer of the brain. As you think and learn new things, the outer layer folds up and gets wrinklier.
YOUR BRAIN AND MEMORY

FUN FACT
Human brains can hold tons of information. There are around 2,500,000 gigabytes of storage space in your brain. The top-of-the-line smartphone has 1,000 gigabytes!
Neurons are cells that send information in your brain. There are three main types of neurons: sensory neurons, motor neurons, and interneurons. All three have different roles and play an important part in communicating with the rest of the body. Your brain has about 100 billion neurons (that’s 100,000,000,000!), which is about the same as the number of stars in the Milky Way galaxy.
**FUN FACT**

The human brain grows a lot between birth and the teenage years. Everyone’s brain grows and matures at different rates. Our brains reach their largest size when we are between 11 and 14 years old. Of course, the size of your brain doesn’t determine how smart you are!
BRAIN POWER

FUN FACT
One of the ways neurons talk to each other is with electrical signals. Neurons are sending these signals all the time. At any moment, your brain is generating enough electricity to power a small lightbulb!
WATER IN YOUR BRAIN

FUN FACT
An adult human brain weighs around 3 pounds and is made up of about 73% water!
TEST YOUR KNOWLEDGE OF COMMON MENTAL HEALTH DISORDERS AND TERMS

Use the word bank to solve the crossword clues below.

**WORD BANK**

<table>
<thead>
<tr>
<th>Anxiety</th>
<th>Neuroscience</th>
<th>Recover</th>
<th>Schizophrenia</th>
</tr>
</thead>
<tbody>
<tr>
<td>Depression</td>
<td>Psychotherapy</td>
<td>Resilience</td>
<td>Treatment</td>
</tr>
</tbody>
</table>

**ACROSS**

2. Another word for talk therapy, which can help people with a variety of mental disorders and emotional difficulties
4. A general word for getting medical care for a physical or mental illness
6. A mood disorder that causes people to feel extremely sad or hopeless
8. The field of study that researches how the brain works, diseases, and disorders

**DOWN**

1. A disorder that could make people see, hear, or believe things that are not really there
3. A general word that means to heal or get better
5. The ability to handle and recover from tough times or situations
7. A feeling of being really worried or fearful

*Answers can be found on page 12.*
A CRYPTIC MESSAGE ABOUT THE BLOOD VESSELS IN YOUR BRAIN

Solve the math problems, then use the letters below your answers to decode the hidden message in the blanks below.

<table>
<thead>
<tr>
<th>30 - 2</th>
<th>3 x 0</th>
<th>50 + 6</th>
<th>2 x 1</th>

FASTER THAN A SPEEDING NEURON!

Unscramble the words below by rearranging the order of the letters. Then use those words to fill in the blanks in the paragraph below, and learn more about how fast the neurons in your brain work!

T R O O M
R U N N E O S
L A N G I S S
A F S T

N A I R T
S A G E M E S S
L I O N S M I L
L C M E H A C I

There are _____________ of _______________ in your brain that tell your whole body what to do. These neurons use electrical and _______________ signals to send billions of _______________ every day that help you think, feel, and do amazing things. They send information to and from your brain at more than 150 miles per hour, which is as fast as a _______________. But if you need to act quickly, _______________ neurons can send _______________ at more than 200 miles per hour. That’s ___________!

HIDDEN MESSAGE

Your brain has about 3024124004028183213266120,000 miles of blood vessels.

If you laid out all the blood vessels in your brain end to end, they would stretch halfway to the moon!
There are millions of neurons in your brain that tell your whole body what to do. These neurons use electrical and chemical signals to send billions of messages every day that help you think, feel, and do amazing things. They send information to and from your brain at more than 150 miles per hour, which is as fast as a train. But if you need to act quickly, motor neurons can send signals at more than 200 miles per hour. That’s fast!
